

Hot air gun

For installing heat shrink components Suitable for use under adverse weather conditions and in confined spaces

Features

- Operates independently from gas or power sources
- Due to the special jet nozzle, the flame will continue to burn outside or in a strong wind
- Easy, single handed operation is guaranteed due to the piëzo ignition system
- The protective spiral avoids skin contact with the hot jet nozzle
- Gas refill cartridges are easy to replace without any danger of gas leaking
- Capacity is sufficient for approximately 2 hours use
- Temperature adjustable from 150°C to 750°C
- Operation is possible at temperatures of -8°C due to butane-propane
- The hot air gun can be used in every angle without any disruption to the flame
- TÜV-approval on the hot air gun and refill cartridges

Hot air gun
