

Copper wire mesh

Copper wire mesh tape has a number of applications but is used mainly for EMC / RFI screening of electrical power, control, data and communication cables and for earth continuity in cable joints. In addition, the springy nature of the tape lends itself to providing a mechanical cushion against adjacent surfaces.

Application is both quick and simple. The tape is wrapped around the item to be protected to give a 50% overlap that produces 4 layers of screening

Features

- Flexible and woven wire mesh in a tube shape
- Made of tinned copper wire
- Easy to install
- 0,50 mm thickness
